

Linköpings universitet

The world's first TAILLESS Human Powered Aircraft (and first Human Powered Aircraft in Scandinavia) is currently under design and development at Linköping University. Aeronautical Master's students supported by professors and professionals are finishing the detailed design, which is already undergoing testing using subscale remotely piloted demonstrators.

We are searching for innovative companies who would like to join this technological challenge which will surely attract national and international media coverage. Please feel free to contact and discuss with us your sponsorship proposals:

- Malin Rosén
malro499@student.liu.se
- Aircraft Design at FluMeS division – IEI
